Support for New Region or New Protocol

Created by Suruchi Suruchi, last modified by Shruthi Subramanian 2 minutes ago

Automation Toolkit can support new regions launched by OCI.

CD3 Automation Toolkit automatically updates the OCI_Region file on every execution.

Alternately, manually edit the file at */cd3user/oci_tools/cd3_automation_toolkit/OCI_Regions*; add new region in below format:

#Region:Region_Key

eg

langley:us-langley-1

You should use <Region> value in the CD3 excel sheet. Outdir for terraform will also be created with name as <Region>

Automation Toolkit can support new protocols in SecurityLists or NSGs.

To update the OCI_Protocols file, Choose the option **"Fetch Protocols to OCI_Protocols"** from **"CD3 Services"** in setUpOCI menu.

Alternately, manually edit the file at */cd3user/oci_tools/cd3_automation_toolkit/OCI_Protocols*; add new protocol in below format:

#protocol number:protocol name

No labels
